RE: Main St. Tie Line (NE/DT circuits) Construction

Earlier this month, department staff and our project consulting engineer received bids for construction of the above referenced project. This Capital project ties circuits from NE, Tracker and Downtown substations connecting at the northern most point of the previous reconductor project. This particular portion was originally slated in 2015 but was delayed with the right of way issues associated with the Main Street roadway project.

Though a half dozen bid packets were taken out, only two bids were received with one submitting a No-Bid that they were too busy. BBC Contractors, Inc. and Sellenriek Construction Inc. submitted the qualified bids in the amounts here:

BBC Contractors, Inc.	\$443,570.20
Sellenriek Construction, Inc.	\$425,548.46
Pike Electric, LLC	No Bid

We have not used Sellenriek before but they come highly recommended by several other utilities and our consulting engineer. This contract price is within budget. Materials have been purchased and most have been delivered to our yard.

Staff recommends that City Council award this project bid to Sellenriek Construction, Inc. If awarded, staff will proceed to obtain, insurance, bonding and a contract for presentation at your next meeting.
